

SolSolution

Vertical Solar Cylinder, P & V LED Street Lighting

Redefining Solar Panel Street Lighting

Aldridge SolSolution solar panel, with its advanced design, adopts the latest technology in solar lighting that will revolutionise the LED street light industry. The SolSolution is a vertically mounted, cylindrical solar panel, a new generation of solar powered LED street light which transforms the whole look of the traditional solar panel.

The SolSolution Solar Cylinder is easily mounted onto any type of pole from 70 - 160mm diameter. The monocrystalline solar panel, with efficiency of up to 21.2% and a lifetime of almost 20 years, is an aesthetic, modular design which has a greater wind resistance than regular solar panels, and the ability to capture sunlight 360°.

There are 2 standard sizes of solar panel power cylinders available: 100W and 140W. Using a multiple of cylinders you can increase the wattage by connecting the cylinders in parallel as required, such as 200W (2pcs of 100) 280W (2pcs of 140W), 300W (3pcs of 100W).

The complete SolSolution system consists of two functional components, the solar cylinder and solar LED light head - Cat. **P** 20W - 60W and Cat. **V** 60W - 120W. The solar cylinder and solar light head are easily connected by MC4 connectors. The battery and SolSolution controller are integral to the light fixture. Optional lamp poles are also available from 5 – 12 metres height. With optimum luminous flux and durability the SolSolution meets the requirements of most lighting projects.

With added benefit, the SolSolution solar cylinder can also be used for, LED signs, LED traffic lights, power plants and construction sites etc. which gives the SolSolution cylinder a cutting edge over traditional solar panels.

SolSolution Solar Cylinder

Aldridge SolSolution Solar panel cylinder offers the following advantages over conventional solar panels:

Universal Application

SolSolution Solar Cylinder is a modular concept, designed for easy installation and disassembly. SolSolution can be used on any type of pole without dismantling. Poles can be sourced separately and the detachable modules with adjustable spacing brackets makes mounting the SolSolution easy on almost any pole.

360° Full Day Charging

With solar cell efficiency of up to 21.2%, the 6 slim solar panels sides are fixed tightly on a hexagon frame, ensuring 50% of solar panel will face the sun at any time of the day.

1	3	
(•)	
2		

Patented Design

The SolSolution Solar Cylinder is designed and based on advanced concepts and manufactured to a high standard. PCT pre-registration has been processed in 180 countries.

Strong Wind Resistance

The cylindrical design improves the wind resistance area. Each cylinder is directly fastened to the pole by 12 screws. The units stand up well against the most violent winds.

Anti Snow Covering

SolSolution Solar Cylinder mounted vertically, is also resistant to snow coverage unlike a regular solar panel. This ensures enough power can be generated even in very challenging climates, reducing the possibility of black outs.

Easy to Clean

Less dust will fall on surface of the SolSolution Cylinder. The unit can be easily cleaned when standing on the ground with a long handled brush, reducing the need for lifts which results in higher efficiency and less maintenance costs.

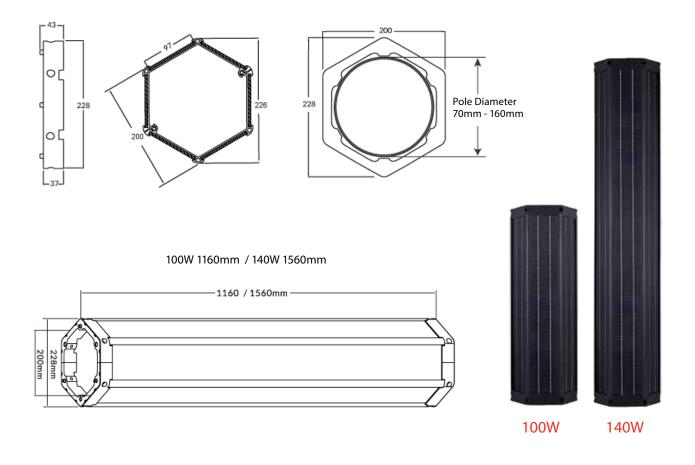

Aesthetic Design

In comparison with the large traditional top mounted solar panels, the SolSolution with its integrated light poles, lamps and cylinders, is a contemporary design, and the ultimate solution where design aesthetics and decorative lighting applications are desired.

Dimensions SolSolution P-LED Lamp

Key Advantages

ALUMINIUM DIE CAST FIXTURE

High quality, streamlined light fitting, powder coated - resistant to salt corrosion.

PERFECT LIGHT DISTRIBUTION

Batwing lighting distribution with smooth distribution curves.

HIGH LUMENS

Philips[®] SMD5050 LEDS, with up to 150lm/W. Maximum power efficiency, keeping lamp's stability and performance.

INTEGRATED DESIGN

LifePO4 battery and high quality MPPT charge controller are built inside of light head fixture combined as a complete unit with MC4 connectors to plug to solar panel. Capable of 3-4 days autonomy. 4-5 hours to fully charge the battery.

LIFETIME BATTERY

100% Performance, maintenance free, LifePO4 lithium battery with up to 2000 recharge cycles.

SIMPLE AND DURABLE CONNECTION

MC4 male and female plug directly to 18V solar panel for quick and easy connection. The 2.5mm² power cord provides stability and less voltage drop.

INTELLIGENT WIRELESS CONTROL SYSTEM

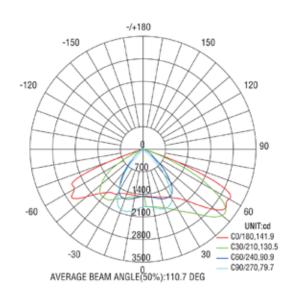

Based on 4G technology, changing lighting modes and monitoring light and battery status, is controlled remotely via mobile, iPad and computer devices.

Battery performance

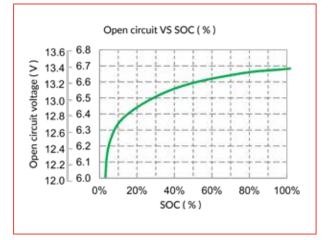

Key Advantages

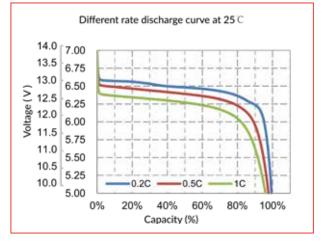

- Lithium Iron Phosphate (LifePO4) Battery
- Safe lithium chemistry with high energy density
- Automatic protection built-in for over-charge, over discharge, over current and over temperature
- Efficient and long-lasting up to 4000+ cycles DOD 50%
- >2000 cycles @0.2C, charge/discharge at 100% DOD
- Internal cell balancing
- Wide temperature range: -20°C ~ 70°C
- Maintenance free after installation
- Cost effective

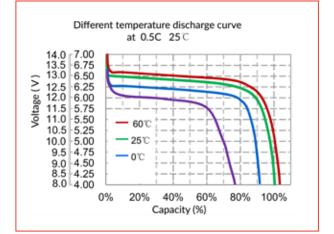

Test Performance of LifePO4 Battery

Intelligent Wireless Control

Using LoRaWAN wireless street lighting system for optimized management and efficiency, communication via the LoRaWAN-based wireless device, provides efficient street lamp system management, thanks to the advanced interface and control architecture. Utilizing the sensors to control and guarantee the optimal system parameters, the information is transferred via single to multi-points using LoRa (Long Range) protocol, and is sent to a control terminal used to check the state of the street lamps and to take appropriate measures in case of failure. The system allows substantial energy savings with increased performance and maintainability.

ōRa

Introduction

WE-GW-10 is a communication gateway based on LoRaWAN protocol standard. It is a key node device for building low-power WAN.

The gateway has full-duplex data forwarding capability, required for long distance communication. With low power consumption and networking requirements for terminal devices with multiple entry points, it also supports multiple style deployments. Operating temperatures between -40~80°C, the gateway supports industrial-grade communication equipment working in harsh environments. Giving access of diverse terminals in different scenarios.

The control performance of the LoRaWAN gateway has more stability compared with 4G technology. In a 4G system, solar light poles transmit signals to each other using "hand by hand". The signal transmission is delayed or "offline" when the 4G signal is weak, especially in remote areas. Whilst using the LoRaWAN system, each light is directly transmitting signals to the LoRaWAN gateway without any Intermediary, this ensures stable and instant communication for monitoring or performing operations.

Each LoRaWAN gateway can control up to 200 units of light device terminals. One project can compose of multi gateways. If the quantity of light device terminals are exceeded, the LoRa gateways can then act as a transparent bridge, relaying messages between end-devices and a central network server on the backend.

Feature and Performance

- Supports 8 channels, accessible nodes number up to 200
- Effective lightning protection grounding protection
- Communication parameters:
- Operating frequency: CN470MHz/US915MHz/EU868MHz
- Channel: 8 125KHz, rate adaptive, support for spread factor SF7-SF12
- Transmit power: < 23dBm
- Receive sensitivity: > -142.5dBm
- Transmission distance: city: 2Km line of sight: 15Km
- Access method: LAN, 2G/3G/4G
- Data Protocol: UDP/TCP/MQTT
- LoRa antenna: T-NC female interface
- 4G antenna: T-NC female interface
- Supply voltage: 12V~36V Recommended: 12V/1A
- Power consumption: <1W</p>
- Working temperature: -40 ~ 80°C
- Network / power interface: RJ45 + DC
- Waterproof rating: IP66
- Weight: 2600g

Solar Charge Controller with Antenna

- System voltage : 12V / 24V
- Power range : 20W ~ 120W
- Charge mode : MPPT
- Solar panel voltage : <60V
- Data record : 7 days
- Efficiency : >97%
- Light sensor delay : 1~40mins changeable
- Working temperature: -40 ~ 80°C
- Waterproof rating: IP68

WiFi Hotspot

The ComFi B9000 Outdoor Dual Band Wireless Access Point / CPE offers the best solution for both range and data intensive network environments. Designed for high performance, the ComFi B9000 features a Power-over-Ethernet (PoE) connection, and includes wall and pole mounting kits. With built-in dual band 2.4 GHz and 5GHz radios, the device simultaneously supports the IEEE 802.11a/b/g/n wireless network standards. Whether creating a wireless network for business or industrial application, the ComFi B9000 is easy to configure and set up within minutes. It is an industrial grade, waterproof device with rugged IP67 metal casing for extreme environments.

Industrial Grade Design

ComFi B9000 operates in temperatures between -20°C~ 70°C, ideal for outdoor deployment on a large scale. Protected by a rugged weather-proof IP67 enclosure, it supports standard 48V PoE IEEE 802.3af.

Dual Band Wireless

ComFi B9000 provides maximum flexibility to connect to the popular 2.4GHz frequency for long range applications and to offload traffic to the faster, less data crowded 5GHz frequency for data intensive applications.

Cellular Networks

ComFi B9000 supports cellular networks while WAN connection is not a primary use. Multiple 4G/3G bands supported such as 4G LTE FDD, TDD, 3G UMTS/CDMA.

Power over Ethernet (PoE)

The Power-over-Ethernet (PoE) feature allows the device to be powered through an Ethernet cable, eliminating the need for a separate power cord. This reduces installation costs and power cable clutter, which provides mounting flexibility for outdoor applications.

Easy Installation

ComFi B9000 Supports Local Web GUI configuration and/ or remote management. No software is required with its hassle-free feature. Simply power up the unit and log in to the setup page.

HARDWARE SPECIFICATIONS :

- CPU 32bit MIPS Industrial Network Processor

- 16MB SPI Flash Flash
- Wireless 2.4GHz 802.11n MIMO up to 300Mbps 5GHz 802.11n MIMO up to 300Mbps 7dBi / 8dBi Fiberglass WIFI Antennas (Single/Dual Band)

INTERFACES:

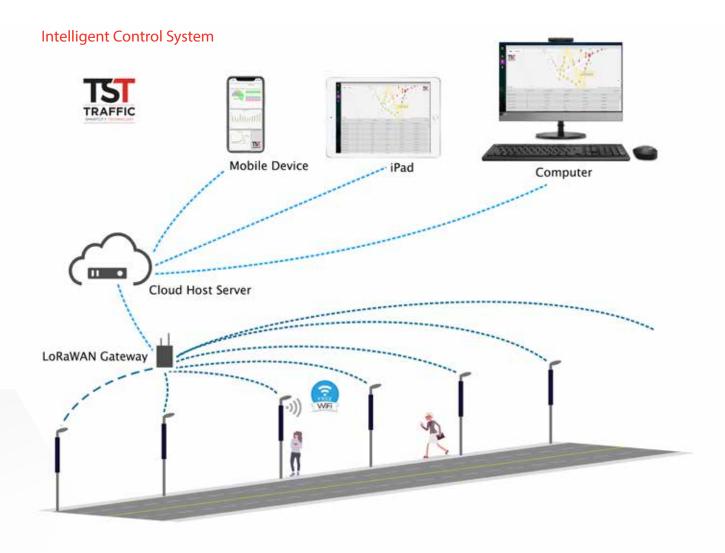

1.	WAN/LAN	1 x 10/100Mbps Fast Ethernet Port, auto MDI/X,
		with 1.5KV magnetic isolation protection,
		IP68 RJ45 Connector
2.	SIM	1 x SIM Card Slot, Standard 1.8V/3V SIM/UIM,
		15KV ESD Protection (Internal)
3.	USB	1 x Standard USB 2.0 Host Port (internal)
4.	Reset	1 x Factory Reset Button (internal)
5.	Power	12~24VDC or 24V Passive PoE/48V PoE 802.3af
6.	Antenna	2 x WIFI Standard N-Type Antenna Port, 50ohm
		1 x Cellular Standard N-Type Antenna Port,
		50ohm (optional)
	Enclosure	Cast Aluminum Casing, IP67 Rating
		protection for outdoor use
	Dimensions	234mm x 153mm x 79.5mm
	Environment	Operating Temperature: -20°C~ 70°C
		Storage Temperature: -40°C ~ 90°C
		Operating Humidity: 10% ~ 95% RH Non-
		condensing Storage Humidity: 5% ~ 95%
		RH Non-condensing
	Surge	
	Protection	Differential Mode Voltage 1.5KV
		Common Mode Voltage 6KV

WIRELESS SPECIFICATIONS :

- Standards IEEE 802.11a/b/g/n
- Frequencies 802.11b/g/n 2.412 2.4835GHz 802.11a/n 5.180-5.825GHz
- Functions 2.4GHz 1 – 13 Channel Selection 5GHz 36 – 165 Channel Selection Band Bandwidth 20MHz / 40MHz
- RF Output Power

2.4GHz IEEE 802.11n 25±2dBm 5GHz IEEE 802.11n 24±2dBm

- Reception Sensitivity
 - 1. 2.4GHz IEEE 802.11b -91±2dBm IEEE 802.11g -77±2dBm IEEE 802.11n -72±2dBm 2. 5GHz: IEEE 802.11a -77±2dBm
